The measurement of soda ash in industrial samples is important. In this experiment, an HCl solution is prepared and standardized with dried sodium carbonate. The standardized HCl is then used to analyze a dried soda ash sample. In the following procedures both indicator and pH meter methods (potentiometric titration) will be used. PROCEDURE:

Experiment 7 - Acid-Base Titrations

In potentiometry experiments (previous section), the

measurement of the electrode potential is carried out under equilibrium conditions: the stepwise addition of titrant makes the concentrations change, but when equilibrium is reached the rates of oxidation and reduction exactly cancel each other and there is no net transformation. The concentration of oxidised or reduced species is measured by spectroscopy, and therefore this approach requires that the redox center has a distinct ...
