The passing of traits from parents to offspring is known as heredity, therefore, genetics is the study of heredity. This introduction to genetics takes you through the basic components of genetics such as DNA, genes, chromosomes and genetic inheritance. Genetics is built around molecules called DNA.

Introduction to Genetics | Basic Biology

KWL Student Work Samples - Each student's KWL chart contained different facts, questions, or reflections but the common theme was that each student was engaged in their personal learning process and grew from the experience. The KWL chart as a student review is a valuable reflective tool that reinforces the curriculum while identifying areas of necessary growth.

Ninth grade Lesson KWL Test Review | BetterLesson

The Central Dogma of Genetics. The Central Dogma of Genetics is that the genetic information stored in genes is first transcribed into messenger RNA (mRNA) and is then translated into protein. Transcription occurs in the nucleus of a cell and uses the sequence of a gene to create an mRNA transcript. Each gene is identified by transcription machinery and includes its regulatory sequences ...

Genetics For Dummies Cheat Sheet - dummies

Genetics has always been concerned with the problem of how the hereditary information in DNA controls what an organism looks like and how it works. Classically this involved the use of genetic variants (mutants) to upset the biological function of the cells or organisms and, from the effect of these mutations, to make deductions about the way cells and organisms worked.

Why study Genetics? — Department of Genetics

Cells are the basic unit of life. Genes are the basic units for passing traits from parent to offspring. Evolution by natural selection is the process that has led to the great diversity of species on Earth. Living things maintain the environment within their cells and bodies. Living things have the ability to acquire

and transform energy.

Introduction to Biology | Basic Biology

Genetics is the study of inheritance or heredity. Genetics helps to explain how traits are passed from parents to their young. Parents pass traits to their young through gene transmission. Genes are located on chromosomes and consist of DNA. They contain specific instructions for protein synthesis.
