Mutualism, association between organisms of two different species in which each benefits. Mutualistic arrangements are most likely to develop between organisms with widely different living requirements.

mutualism | Types, Examples, & Facts | Britannica

The Biology of Mutualism. Ecology and Evolution. Edited by Douglas H. Boucher. Description. The view of nature as `red in tooth and claw', as a jungle in which competition and predation are the predominant themes, has long been important in both the scientific and popular literature. However, in the past decade another view has become widespread among ecologists: the idea that mutualisms--mutually beneficial interactions between species--are just as important as competition and predation.

The Biology of Mutualism - Douglas H. Boucher - Oxford ...

Mutualism is a close, symbiotic relationship that mutually benefits two different species present in an ecosystem. Many examples exist, such as the unusual relationship between the clown fish and the fish-eating sea anemone. Mutualistic interactions are common but sometimes rather complicated.

Mutualism (Biology): Definition, Types, Facts & Examples ...

In biology and ecology, a mutualism is a form of symbiosis that is characterized by both species benefiting from the association. It is one of the symbiotic relationships occurring in nature. Other common ecological interactions between or among species are commensalism, parasitism, predation, cooperation, and competition.

Mutualism - Definition and Examples - Biology Online ...

Mutualism describes the ecological interaction between two or more species where each species has a net benefit. Mutualism is a common type of ecological interaction. Prominent examples include most vascular plants engaged in mutualistic interactions with mycorrhizae, flowering plants being pollinated by animals, vascular plants being dispersed by animals, and corals with zooxanthellae, among many others. Mutualism can be contrasted with interspecific competition, in which each species experienc

Mutualism (biology) - Wikipedia

Mutualism Definition. Mutualisms are defined as interactions between organisms of two different species, in which each organism benefits from the interaction in some way. These types of interaction are common and ubiquitous throughout all ecosystems, and scientists are increasingly recognizing the important role that they play in ecology.

Mutualism ecology's home - Mutualism ecology

The study of mutualism had its origin in organismal biology, and many of the traits that have been of greatest interest to organismal biologists have been those that serve some function within mutualisms. Particularly well investigated are plant traits involved in attracting and rewarding pollinators and seed dispersers.
