Xilinx INT8 optimization provide the best performance and most power efficient computational techniques for deep learning inference. Xilinx's integrated DSP architecture can achieve 1.75X solution-level performance at INT8 deep learning operations than other FPGA DSP architectures. ABSTRACT

Deep Learning with INT8 Optimization on Xilinx Devices ...

Traditional deep learning solutions or applications use 32 bits of floating-point precision (FP32) for training and inference. Deep learning inference with 8-bit (INT8) multipliers (accumulated to 32-bits) with minimal loss in accuracy (Norman 2017 , login required) is common for various convolutional neural network (CNN) models (Gupta 2015 , Lin 2016 , Gong 2018).

Deep Learning With Int8 Optimization On Xilinx Devices

int8 quantization has become a popular approach for such optimizations not only for machine learning frameworks like TensorFlow and PyTorch but also for hardware toolchains like NVIDIA ® TensorRT and Xilinx ® DNNDK—mainly because int8 uses 8-bit integers instead of floating-point numbers and integer math instead of floating-point math, reducing both memory and computing requirements.

What Is int8 Quantization and Why Is It Popular for Deep ...

Despite the attractive benefits, when quantizing gradients to 8-bit, the normal training tends to become unstable, since the distortion of gradients easily misleads the direction of training and causes crash of optimization. This definitely makes INT8 training very difficult, especially for the deep networks.

Towards Unified INT8 Training for Convolutional Neural ...

Network quantization is an effective approach to accelerating deep learning models. In quantized models, both data and model parameters are represented with low precision data types such as int8 and float16. The lowered data bandwidth reduces the inference time and memory/storage requirements, as well as the power consumption.

Automating Optimization of Quantized Deep Learning Models ...

For a deep learning problem, we will usually define a loss function first. Once we have the loss

function, we can use an optimization algorithm in attempt to minimize the loss. In optimization, a loss function is often referred to as the objective function of the optimization problem. By tradition and convention most optimization algorithms are concerned with minimization. If we ever need to maximize an objective there's a simple solution - just flip the sign on the objective.

8.1. Optimization and Deep Learning — Dive into Deep ...

Deep architectures make predictions by following a feed-forward mechanism in which each layer takes the output of the previous layer as input, and uses the parameters represented by θ (or as many familiar with optimization in neural networks would call them, the weights and biases), and finally outputs the transformed features that are passed onto the next layer. The output of the final ...
