Introduction Network analysis is the synthesis of two most useful techniques of project management i.e P.E.R.T and C.P.M. PERT was developed as a management tool for coordination and early completion of Polaris Ballistic Missile Project in U.S.A, resulting in reduction of 30% time in project execution. A contemporary of PERT is CPM and was developed in connection with maintenance and construction work. Both the techniques use, PERT and CPM use 'network' and 'critical path' as the ...

Network synthesis is a design technique for linear electrical circuits. Synthesis starts from a prescribed impedance function of frequency or frequency response and then determines the possible networks that will produce the required response. The

technique is to be compared to network analysis in which the response of a given circuit is calculated. Network synthesis was a great leap forward in circuit design. Prior to network synthesis, only network analysis was available, but this requires tha

Network synthesis filters are signal processing filters designed by the network synthesis method. The method has produced several important classes of filter including the Butterworth filter, the Chebyshev filter and the Elliptic filter. It was originally intended to be applied to the design of passive linear analogue filters but its results can also be applied to implementations in active filters and digital filters. The essence of the method is to obtain the component values of the filter from
