Independent and Dependent Variable Examples. In a study to determine whether how long a student sleeps affects test scores, the independent variable is the length of time spent sleeping while the dependent variable is the test score. You want to compare brands of paper towels, to see which holds the most liquid.

Independent and Dependent Variable Examples

An example of this would be Boyle's Gas Law where the pressure of a gas is inversely proportional to its volume as long as the temperature remains constant. Using the equation ($y = kx$), one can plot a graph that will yield a theoretical value for y when given any value for x, allowing one to accurately predict the affect the independent variable will have on the dependent variable.

Independent and Dependent Variable Examples

An independent variable (IV) is a variable that is manipulated by a researcher to investigate whether it consequently brings change in another variable. This other variable, which is measured and predicted to be dependent upon the IV, is therefore named the dependent variable (DV). For example, in an experiment examining the effect of fatigue on short term memory, there are two groups 'fatigued' and 'non-fatigued'.

Independent and Dependent Variables | Psychology | tutor2u

The independent variable is the variable the experimenter changes or controls and is assumed to have a direct effect on the dependent variable. Two examples of common independent variables are gender and educational level. The dependent variable is the variable being tested and measured in an experiment, and is 'dependent' on the independent variable.

What are Independent and Dependent Variables? | Simply ...

Two examples of common independent variables are age and time. There's nothing you or anything else can do to speed up or slow down time or increase or decrease age. They're independent of everything else. The dependent variable (sometimes known as the responding variable) is what is being studied and measured in the experiment.

Iv And Dv Examples

In an experiment, the IV is a variable that is changed to see how it affects something else, whereas the DV is a variable that is being measured/observed. The DV is assumed to be affected by the IV, hence the term 'dependent' (its value depends on the state of the IV). For example, if an experimenter wanted to find out whether time spent studying improves exam results, the IV would be time spent studying and the DV would be exam results.
