Materials for Gas Turbines An Overview

The gas turbine engine used in offshore oil and gas central processing platform. Many other MMCs are being explored for applications in different parts and kinds of gas turbines. Niobium or rhenium are metals with similarities to molybdenum that can also be alloyed with silicon or cobalt to create MMCs and could possibly be used in specific situations [4,5].

High-Temperature Materials For Gas Turbines And Their Future

Indestructible Paint has for many years supplied coatings for flight turbines to most of the world's aero engine manufacturers.

Over this period, much development work had been conducted, to smooth the operation of aircraft engines as performance increases and a need for cleaner engines grew. Utilising the technologies developed over this time, Indestructible can now offer similar high-performance coatings for the Power Generation and Industrial Gas Turbines markets.
