Deformation And Fracture Behaviour Of

The investigation of deformation and fracture behaviour using the experimental methods of fracture mechanics has been the subject of intense research during the last decade. In a systematic manner, modern aspects of fracture mechanics in the industrial application of polymers for bridging basic research and industrial development are illustrated by multifarious examples of innovative materials usage.

The effect of temperature on the tensile behaviour and fracture appearance was also studied using the scanning and transmission electron microscopes. It was found that deformation twinning and dynamic strain ageing phenomena are responsible for work hardening of the steel.

Deformation and fracture behaviour of high manganese ...

Large strain deformation and fracture toughness parameters are determined. • Experimental trends between mechanical parameters are explored. • Strain hardening decreases exponentially with increasing shear modulus. • Fracture toughness increases linearly with increasing shear modulus.

Varying the interfacial properties, through chemical modification

of the fibre prior to lamination, was found to have a marked effect upon the onset of yielding and the yield point itself, as well as the deformation and fracture behaviour of the laminate.

Deformation and fracture behaviour of flax fibre ...

To characterize the deformation behavior during mixed-mode I/II tests by 2D-DIC, the Cartesian coordinate system was used to define displacement components, and a reference coordinate system was used for measurement data analysis since all displacements in 2D-DIC were calculated based on the undeformed image configuration.

The microstructural features and the influence of the B2 particles on the mechanical properties and the deformation/fracture behaviors of the Ti 45 Cu 40 Ni 7 Zr 5 Sn 2.5 Si 0.5 BMGCs have been investigated using BMGCs with different volume fraction of the B2 particles. The monolithic BMG without macroscopic plasticity exhibits typical vein patterns formed by the main shear band propagation on ...

This study investigates the plastic deformation and fracture behaviour of titanium alloy (Ti-6Al-4V) under high strain rates and various temperature conditions. Mechanical tests are performed at constant strain rates ranging from 5×10^{-2} to $3 \times 10^3 \text{ s}^{-1}$ at temperatures ranging from room temperature to 1100°C by means of the compressive split-Hopkinson bar

technique.

Deformation and Fracture Behaviour of Polymers PDF Complet ...

The relationship between large-deformation and fracture behaviour of a gel and its structure proves to be far more complicated than for small-deformation properties. The main reasons for this difference are: (i) the much more important effect of relatively large inhomogeneities on fracture properties and (ii) some very different causes for the strain rate dependence.

Large deformation and fracture behaviour of gels - Faraday ...

The plastic deformation and fracture behaviour of Ti-55511 alloy subjected to high strain rate at room temperature have been reported. Results obtained from the mechanical testing show that macro shear failure occurs when strain rate is above 1370 s^{-1} , and the failure strain is about 0.16. Collapse of the specimens occurs along a plane inclined at an angle of about 45° to the compression axis, and the strain rate hardening effect of

Ti-55511 alloy is apparent.

High-strain-rate plastic deformation and fracture ...

The application of fracture mechanics to polymers and composites allows the quantitative description of the toughness behaviour by means of fracture mechanics parameters and enables preventive failure analysis. In recent years this young scientific discipline has developed rapidly, and now the experimental results are looking for more applications in industrial practice.

The macroscopic fracture modes of the bulk nanostructured material (BNM) prepared following three pre-heat temperatures are investigated. The microscopic mechanisms controlling tensile deformation and final fracture behaviour are discussed with regards to the intrinsic microstructural effects in the UFG alloy, nature of loading, and the kinetics and mechanisms of deformation
