We discuss a new geometric construction of port-Hamiltonian systems. Using this framework, we revisit the notion of interconnection

providing it with an intrinsic description. Special emphasis on theoretical and applied examples is given throughout the paper to show the applicability and the novel contributions of the proposed framework.

A note on the geometry of linear Hamiltonian systems of signature 0 in  $R^4$   
James Montaldi January 8, 2006 Abstract  
It is shown that a linear Hamiltonian

system of signature zero on  $R^4$  is elliptic, hyperbolic or mixed according to the number of Lagrangian planes in the null-cone  $H^{-1}(0)$ , or equivalently the number of invariant Lagrangian planes.
