Class IV: Science - The Digestive system

Digestive System Paper

The human digestive system is responsible for the intake, breakdown, absorption and finally removal of nutrients and energy needed for the functioning of the human body. It performs these duties by allowing nutrients and energy in the form of food to enter the body, and then removing the materials needed from the food, then absorbing the materials into the body, as well as sending these materials to the place that they're needed, and finally removing the leftover materials from the body.

The human digestive system - UKessays.com

1027 Words | 5 Pages. The digestive system is a myriad of organs functioning together to turn food into energy and basic nutrients to nourish the whole body. Food passes through a long tube on the inside of the body which is known as the alimentary canal or the gastriontestinal tract. Digestion begins in the mouth.

Free Digestive System Essays and Papers | 123 Help Me

The digestive system is an example of an organ system in which several organs work together to digest and absorb food. Digestion is a process in which relatively large, insoluble molecules in food (such as starch, proteins) are broken down into smaller, soluble molecules that can be absorbed into the bloodstream and delivered to cells in the body. These small soluble molecules (such as glucose and amino acids) are used either to provide cells with energy (via respiration), or with materials ...

The Human Digestive System | AQA GCSE Biology Revision Notes

Process of the Digestive System. The overall digestive process involves a mixture of food and drink with the digestive juices. The food is then broken down into small molecules through chewing and the digestive juices and finishes in the small intestine. The movement of the food down along the process is referred to as peristalsis.
