Fermentation. We will investigate fermentation by measuring the amount of carbon dioxide produced by yeast. The rate of cellular respiration is proportional to the amount of CO₂ produced (see the equation for fermentation above).. In this experiment, we will measure the rate of cellular respiration using either distilled water or one of four different food sources.

The lab proved many important concepts relating to cellular respiration. From this lab I have concluded that organisms placed in a cold environment will show a lesser rate of cellular respiration than those in an average temperature environment. The lab showed that temperature and respiration rates are proportional to each other.
