How Apollo Flew to the Moon by W. David Woods is just a masterpiece of a read. It flows through the missions on a step by step basis, with really good explanations of space travel and gravity, etc. As an Aircraft Engineer I didn't find the book complicated, but neither is it patronising to 'non technical' types.

The Apollo spacecraft was composed of three parts designed to accomplish the American Apollo program's goal of landing astronauts on the Moon by the end of the 1960s and returning them safely to Earth. The expendable spacecraft consisted of a combined command and service module and an Apollo Lunar Module. Two additional components complemented the spacecraft stack for space vehicle assembly: a spacecraft-LM adapter designed to shield the LM from the aerodynamic stress of launch and to ...
