A definitively different material. Composites differ from traditional materials in that composite parts comprise two distinctly different components — fibers and a matrix material (most often, a polymer resin) — that, when combined, remain discrete but function interactively to make a new material, the properties of which cannot be predicted by simply summing the properties of its components.

Pultrusion is a cost-effective automated process for manufacturing continuous, constant cross-section composite profiles , . It is similar to the extrusion process used for manufacturing metallic aircraft stringers except the material is pulled through a die instead of being pushed through . Raw materials are a liquid resin mixture (containing resin, fillers and specialized additives) and flexible textile reinforcing fibers.
