With respect to chemoprevention of colon cancer by GSE, in vivo studies using Fischer 344 rats have shown that dietary GSE significantly inhibits azoxymethane (AOM)-induced formation of colonic aberrant crypt foci (ACF) in terms of crypt multiplicity . This study also showed that feeding of GSE inhibited AOM-induced cell proliferation and enhanced apoptosis in colon including ACF, which was associated with the reduction in the expression of COX-2, iNOS, cyclin D1, and survivin.
