In the variational functional framework, a gray-tone image is generally represented by a square-integrable gray-tone function. The basic idea is to consider that the resulting gray-tone image of a processing or an analysis is the solution of a variational problem or, in other words, that this gray-tone function minimizes a suitable functional

operating in an appropriate gray-tone function space.

4 Variational Methods in Image Processing Traditionally, image processing has been investigated via spectral and Fourier methods in the frequency domain. In the last two decades, variational methods and partial differential equation (PDE) methods have drawn great attention to address a variety of image processing problems including image segmentation,
