Process simulation programs are
opening up new possibilities in quality
assurance. By using process simulation
one can determine and visualise process
data (e.g., local pressures,
temperatures, velocities, etc.) on the
whole part. With this knowledge the
sensor position can be optimised in order
to measure the process data at the
critical spots.

Simulator, you can visualize, analyze and optimize processes directly in the familiar Microsoft Visio interface. Transform your processes, value streams and business processes into dynamic, graphically appealing simulation models. Take advantage of Process Simulator's predictive simulation technology to determine risk-free in a virtual environment, which solution ideas and concepts will deliver the best results for your business.

Dynamic process simulation with Process Simulator

The combination of simulation analysis and testing forms the verification process that ensures our product meets requirements and intent. Simulation analysis is critical to the product development process, using computer power to help us define the best product for our needs, as quickly, affordably, and safely as possible.

What Is Simulation Analysis? | PTC

Simulation The imitation of the operation of a real world process or system over time. In a simulation we: 1. Generate of an artificial history using a model. 2. Observe that history. 3. Draw conclusions about the real system from the artificial history of the simulation.
