The Clinical Potential Of Interferons Treatment Of Viral ...

The potential of interferons as an antiviral panacea has not been realised. Interferon alfa is the only effective antiviral treatment for chronic infection with hepatitis B and chronic hepatitis C, but only a minority of patients is cured and interferon therapy is prohibitively expensive for developing countries.

Clinical Applications of the Interferons | The BMJ

See ClinicalTrials.gov for a list of ongoing clinical trials for interferon and COVID-19. Adverse Effects. The most frequent adverse effects of interferon alfa include flu-like symptoms, nausea, fatigue, weight loss, hematological toxicities, elevated transaminases, and psychiatric problems (e.g., depression and suicidal ideation).

“The results confirm our belief that interferon beta, a widely known drug approved for use in its injectable form for other indications, may have the potential as an inhaled drug to restore the lung’s immune response and accelerate recovery from Covid-19,” said the study’s lead author, Tom Wilkinson, from the University of Southampton, UK, in a statement.

Inhaling immune protein interferon beta improves recovery ...

Interferons are a group of signaling proteins made and released by host cells in response to the presence of several viruses. In a typical scenario, a virus-infected cell will release interferons causing nearby cells to heighten their anti-viral defenses. IFNs belong to the large class of proteins known as cytokines, molecules used for communication between cells to trigger the protective defenses of the immune system that help eradicate pathogens. Interferons are named for their ability to "int

The Clinical Potential Of Interferons Treatment Of Viral ...

Currently, there are no effective treatments for COVID-19 and our understanding of the immunological response to SARS-CoV-2 is limited. A report in this issue of Clinical Infectious Diseases from Professor Kwok-Yung Yuen and colleagues demonstrates that SARS-CoV-2 induces very weak expression of interferons (IFNs) in infected cells . This absence of IFN production likely hampers the early innate immune response to SARS-CoV-2 infection.
