Cell membrane receptor proteins help cells communicate with their external environment through the use of hormones, neurotransmitters, and other signaling molecules. Transport proteins , such as globular proteins, transport molecules across cell membranes through facilitated diffusion.

Cell Membrane Function and Structure

Cell membranes are an example of semi-permeable membranes. Cell membranes allow small molecules such as oxygen, water carbon dioxide, and oxygen to pass through but do not allow larger molecules like glucose, sucrose, proteins, and starch to enter the cell directly. Figure \\PageIndex{4}\\): Osmosis through the semi-permeable membrane of the cells.

5.7: Cell Transport - Biology LibreTexts

Transport Across Cell Membrane. The cell membrane is the protective barrier of the cell from the outside environment. It is selectively permeable which means not all materials can pass through it. Its selective permeability decides that essential biomolecules enter the cell cytoplasm, metabolic intermediates remain inside the cell, and waste materials are thrown out.
