by Lithmee. 4 min read. The main difference between fuzzy logic and neural network is that the fuzzy logic is a reasoning method that is similar to human reasoning and decision making, while the neural network is a system that is based on the biological neurons of a human brain to perform computations. Artificial Intelligence (AI) is the simulation of human intelligence processes by machines; especially, the computer systems.

What is the Difference Between Fuzzy Logic and Neural Network

Lakhmi C.Jain and N.M. Martin - Fusion of Neural Networks Fuzzy Systems and Genetic Algorithms. Artificial neural networks can mimic the biological information-processing mechanism in - a very limited sense. Fuzzy logic provides a basis for representing uncertain and imprecise knowledge and forms a basis for human reasoning.

Fuzzy logic is largely used to define the weights, from fuzzy sets, in neural networks. When crisp values are not possible to apply, then fuzzy values are used. We have already studied that training and learning help neural networks perform better in unexpected situations. At that time fuzzy values would be more applicable than crisp values.
