Driving With Music: Cognitive-Behavioural Implications

CRC Press

This book, the first full-length text on the subject, explores the everyday use of music listening while driving a car. It presents the relationship between cars and music in an effort to understand how music behaviour in the car can either enhance driver safety or place the driver at increased risk of accidents. A great deal of work has been done to investigate and reduce driver distraction and inattention, but this book is the first to focus on in-cabin aural backgrounds of music as a contributing factor to human error and traffic violations. *Driving With Music* begins by outlining the automobile, its relationship to society, and the juxtaposition of music with the automobile as a complete package. It then highlights concepts from the fields of music perception and cognition, and, within this framework, looks at the functional use of background music in our everyday lives. Driver music behaviours - both adaptive and maladaptive - are explored, with the focus on contradictions and ill-effects of in-car music listening. To conclude, implications, applications and countermeasures are suggested.

The Pleasures of Computer Gaming**Essays on Cultural History, Theory and Aesthetics****McFarland**

This collection of essays situates the digital gaming phenomenon alongside broader debates in cultural and media studies. Contributors to this volume maintain that computer games are not simply toys, but rather circulate as commodities, new media technologies, and items of visual culture that are embedded in complex social practices. Apart from placing games within longer arcs of cultural history and broader critical debates, the contributors to this volume all adopt a pedagogical and theoretical approach to studying games and gameplay, drawing on the interdisciplinary resources of the humanities and social sciences, particularly new media studies. In eight essays, the authors develop rich and nuanced understandings of the aesthetic appeals and pleasurable engagements of digital gameplay. Topics include the role of "cheats" and "easter eggs" in influencing cheating as an aesthetic phenomenon of gameplay; the relationship between videogames, gambling, and addiction; players' aesthetic and kinaesthetic interactions with computing technology; and the epistemology and phenomenology of popular strategy-based wargames and their relationship with real-world military applications. Notes and a bibliography accompany each essay, and the work includes several screenshots, images, and photographs.

Packaging Boyhood**Saving Our Sons from Superheroes, Slackers, and Other Media Stereotypes** *St. Martin's Press*

Player. Jock. Slacker. Competitor. Superhero. Goofball. Boys are besieged by images in the media that encourage slacking over studying; competition over teamwork; power over empowerment; and being cool over being yourself. From cartoons to video games, boys are bombarded with stereotypes about what it means to be a boy, including messages about violence, risktaking, and perfecting an image of just not caring. Straight from the mouths of over 600 boys surveyed from across the U.S., the authors offer parents a long, hard look at what boys are watching, reading, hearing, and doing. They give parents advice on how to talk with their sons about these troubling images and provide them with tools to help their sons resist these messages and be their unique selves.

Need for Speed**Most Wanted [electronic Resource].****Playstation 3** *PediaPress***From Pac-Man to Pop Music****Interactive Audio in Games and New Media** *Routledge*

Digital interactive audio is the future of audio in media - most notably video games, but also web pages, theme parks, museums, art installations and theatrical events. Despite its importance to contemporary multi-media, this is the first book that provides a framework for understanding the history, issues and theories surrounding interactive audio. Karen Collins presents the work of academics, composers and sound programmers to introduce the topic from a variety of angles in order to provide a supplementary text for music and multimedia courses. The contributors cover practical and theoretical approaches, including historical perspectives, emerging theories, socio-cultural approaches to fandom, reception theory and case study analyses. The book offers a fresh perspective on media music, one that will complement film studies, but which will show

the necessity of a unique approach when considering games music.

Gender, Age, and Digital Games in the Domestic Context *Routledge*

Western digital game play has shifted in important ways over the last decade, with a plethora of personal devices affording a range of increasingly diverse play experiences. Despite the celebration of a more inclusive environment of digital game play, very little grounded research has been devoted to the examination of familial play and the domestication of digital games, as opposed to evolving public and educational contexts. This book is the first study to provide a situated investigation of the site of family play—the shared spaces and private places of gameplay within the domestic sphere. It carries out an empirically grounded and critical analysis of what marketing and sales discourses about shifts in the digital games audience actually look like in the space of the home, as well as the social and cultural role these ludic technologies take in the everyday practices of the family in the domestic context. It examines the material realities of video game technologies in the home; including time management and spatial organization, as well as the discursive role these devices play in discussions of technological competence and its complex relationship to age, generational differences, and gender performance. Harvey's interdisciplinary approach and innovative methodology will hold great critical appeal for those studying digital culture, children's media, and feminist studies of new media, as well as critical theories of technology and leisure and sport theory.

Soft Innovation

Economics, Product Aesthetics, and the Creative Industries *OUP Oxford*

At its heart this book is about innovation and the innovation process. On the way, it considers aesthetics, design, creativity and the creative industries, and a number of other similar topics. Much of the existing economic literature on innovation has taken a particularly technological or functional viewpoint as to what sort of new products and processes are to be considered innovations. One of the key things this book shows is that there is a type of innovation, here labelled 'soft innovation', primarily concerned with changes in products (and perhaps processes) of an aesthetic or intellectual nature, that has largely been ignored in the study

of innovation prevalent in economics. Examples of innovations that, as a result of this refocusing, are here placed at the centre of the analysis include: the writing and publishing of a new book, the writing, production, and launching of a new movie, the development and launch of a new advertising promotion, the design and production of a new range of furniture, and architectural activity in the generation of new built form designs. The realisation of the existence of soft innovation means that, not only is innovation more widespread than previously considered, but that it may also take a different form than commonly considered. Soft Innovation addresses key issues such as: * The measurement of the rate and extent of soft innovation, * The determinants of the rate and direction of soft innovation and its diffusion, * The impacts of soft innovation and diffusion upon outputs, productivity, employment, firm performance, trade, and economic welfare, * Policy, considering whether there is a rationale for government intervention in the soft innovation generation and diffusion processes, and if so what instruments can be used in such intervention? Soft Innovation breaks new ground in the study of innovation, and will be key reading for academics and researchers of Innovation, Marketing, and Design, as well as consultants, practitioners, and policy-makers concerned with the creative industries.
