Word Embeddings in NLP - GeeksforGeeks

The bag-of-words model is a simplifying representation used in natural language

processing and information retrieval. In this model, a text is represented as the bag of its words, disregarding grammar and even word order but keeping multiplicity. The bag-of-words model has also been used for computer vision. The bag-of-words model is commonly used in methods of document classification where the occurrence of each word is used as a feature for training a classifier. An early reference to "bag of
