Hydroxyethyl Starch A Current Overview

Hydroxyethyl starch (HES) is the most common red blood cell sedimentation agent used to purify neutrophil collections for granulocyte transfusions. HES is a volume expander that carries a black box warning for increased risk of mortality and renal failure in critically ill patients, including patients with sepsis, and has been associated with increased bleeding risk.

populations. On 23 October 2013, ...

Hydroxyethyl starch solutions for infusion | European ...

Hydroxyethyl substitution of hydroxyethyl starch (HES) glucose subunits takes place preferentially at the C 6 and C 2 positions. Hydroxyethyl groups at the position of the C 2 atom inhibit the access of α -amylase to the substrate more effectively than do hydroxyethyl groups at the C 6 position. 9 Hence, HES products with high C 2 /C 6 ratios are expected to be more slowly degraded.
