Lab #13: Qualitative Analysis of Cations and Anions Objectives: 1. To understand the rationale and the procedure behind the separation for various cations and anions. 2. To perform qualitative analysis of two unknown solutions that contain various ions (cations and anions) and positively identify these ions using established schemes. Materials:

Lab 13 Qualitative Analysis of Cations and Anions

This experiment will analyze known and unknown solutions for the presence of specific cations and anions. The general approach to finding out what ions are in a solution is to test for the presence of each possible component by adding a reagent that will cause that component, if present, to react in a certain way.

CHM 130 Lab 8 Identification of Cations and Anions (revised)

Learn how to identify the cations and anions in an unknown sample or solution using simple test tube experiments. The different chemical properties and reactions of various cations and anions enable you to distinguish between them using simple laboratory chemicals. It's common to separate out these tests into cation tests (group 1, group 2 and the ammonium ion), anion tests (halides, nitrates, sulfates, etc.) and transition metal ion tests (iron (II), iron (III), copper, etc.)

In this lab, you will identify anions in an unknown. Unlike the last

lab (Group I Cations), however, you will not be just be using a flow chart in which you separate ions away from each other. Instead, in this lab, you first will perform some preliminary tests using AgNO_3 , BaCl_2 , and H_2SO_4 . In these tests, certain groups of anions will react while other groups of anions will not react. By

One technique used to analyze ammonium cations is discrete analysis. The technique provides accurate analysis for a particular analyte through a colorimetric, enzymatic, or electrochemical measurement. ISO 15923-1 uses a discrete analyzer to determine ammonium and common anions in potable water, surface, ground and wastewater.
