Seismic Reflection Principles Powerpoint Basic principles of the seismic method In this chapter we introduce the basic notion of seismic waves. In the earth, seismic waves can propagate as longitudinal (P) or as shear (S) waves. For free space, the one-dimensional wave equation is derived.

$K=\hat{\cdot}$: The 19. Figure 2.1: Particle motion of P and S waves solution to this equation is: $p(x;t) = s(t - x/c)$ (2.4) where $s(t)$ is some function. Note the dependency on space and time via $(t - x/c)$, which denotes that it is a travelling wave. The sign in the argument is depending on which direction the wave travelling in.

This law is utilized in the seismic reflection method. It states that "the angle of incidence is equal to the angle of reflection". In case of $I=0$, the ratio of the reflected energy of P-wave, E_r , to the incident energy, E_i , is given by: $E_r / E_i | I=0$ The square root of the above relationship is called Reflection Coefficient, R .

Principles of seismic data processing m.m.badawy

The general principle of seismic reflection is to send elastic waves (using an energy source such as dynamite explosion or Vibroseis) into the Earth, where each layer within the Earth reflects a portion of the wave's energy back and allows the rest to refract through. These reflected energy waves are recorded over a predetermined time period (called the record length) by receivers that detect the motion of the ground in which they are placed.
