Solving Rational Equations Answers

Solving Rational Equations. A rational equation is a type of equation where it involves at least one rational expression, a fancy name for a fraction. The best approach to address this type of equation is to eliminate all the denominators using the idea of LCD (least common denominator). By doing so, the leftover equation to deal with is usually either linear or quadratic.

Procedure of solving the Rational Equations: First of all, find out the LCD of all the Rational Expressions in the given equation. Then multiply both sides by the LCD. Solve the equation. Finally, check your solutions and throw out any that make the denominator zero.

Rational Equations (Description & Examples) - ExamPlanning

The correct answer is m = 8. We've seen that there is more than one way to solve rational equations. Because both of these techniques manipulate

and rewrite terms, sometimes they can produce solutions that don't work in the original form of the equation. These types of answers are called extraneous solutions.

Solving Rational Equations - NROC

A rational equation is any equation that involves at least one rational expression. Like normal algebraic equations, rational equations are solved by performing the same operations to both sides of the equation until the variable is isolated on one side of the equals sign.
