To counter response distortions associated with the use of rating scales (a. k. a. Likert scales), items can be

presented in a comparative fashion, so that respondents are asked to rank the items within blocks (forced-choice format). However, classical scoring procedures for these forced-choice designs lead to ipsative data, which presents psychometric challenges that are well described in the ...

Fitting a Thurstonian IRT model to forced-choice data ...

Fitting a Thurstonian IRT model to forced-choice data using Mplus Typical questionnaire and survey items are presented to respondents one at a time (single-stimulus items), which often leads to indiscriminate endorsement of all desirable items by respondents, resulting in systematic score inflation.

Fitting a Thurstonian IRT model to forced-choice data ...

The thurstonianIRT package allows to fit various models from Item Response Theory (IRT) for forced-choice questionnaires, most notably the Thurstonian IRT model originally proposed by (Brown & Maydeu-Olivares, 2011). The key characteristic of forced-choice questionnaires is that participants cannot endorse all items at the same time and instead have to make a comparative judgment between two or more items.

fit_TIRT_stan: Fit Thurstonian IRT models in Stan in ...

A Thurstonian model is a stochastic transitivity model with latent variables for describing the mapping of some continuous scale onto discrete, possibly ordered categories of response. In the model, each of these categories of response corresponds to a latent variable whose value is drawn from a normal distribution, independently of the other response variables and with constant variance. Developments over the last two decades, however, have led to Thurstonian models that allow unequal variance

Thurstonian model - Wikipedia

The thurstonianIRT package allows to fit various models from Item Response Theory (IRT) for forced-choice questionnaires, most notably the Thurstonian IRT model originally proposed by (Brown & Maydeu-Olivares, 2011).
