Optimal Control Problems for Partial Differential ...

In optimal control theory, the Hamilton-Jacobi-Bellman equation gives a necessary and sufficient condition for optimality of a control with respect to a loss function. It is, in general, a nonlinear partial differential equation in the value function, which means its solution is the value function itself. Once this solution is known, it can be used to obtain the optimal control by taking the maximizer of the Hamiltonian involved in the HJB equation. The equation is a result of the theory ...

4.2 Summary of results on the decoupling of optimal control problems. We will recall here a few results on the decoupling of optimal control problems for systems determined by parabolic-type partial differential equations such as those obtained by J.-L. Lions and presented in [LIO 68a]. These are the results that inspired the factorization ...

Then our problem is formulated as a stochastic control problem with partial information. We derive the Hamilton-Jacobi-Bellman equation. We solve this equation to obtain an explicit form of the value function and the optimal strategy for this problem. Moreover, we also introduce the results obtained by the martingale method.

Optimal Control Problems for Partial Differential ...

General method. Optimal control deals with the problem of finding a control law for a given system such that a certain optimality criterion is achieved. A control problem includes a cost functional that is a function of state and control variables. An optimal control is a set of differential equations describing the paths of the control variables that minimize the cost function.
