Writing Linear Equations Review Worksheets & Teaching ...

Here, we will solve systems with 2 variables, given in 2 linear equations. Idea here is to express one variable using the other variable in one equation, and use it in the second equation, where we would get a linear equation with one variable. Let’s the how it works in one simple example: x - y = 3. 2x + y = 9. y = x - 3. 2x + x - 3 = 9. 3x = 9 + 3. From the first equation, we express y using x. In the second equation, we write x - 3 instead of y.

Algebra 2 - MRS. REED'S MATH CLASS

Two step math equations are algebraic problems that require you to make two moves to find the value of the unknown variable. For example, using the equation 3x + 5 = 11 we will need to perform two steps to find the value of x. The first step would be to get the constant values of the equation by themselves. In this case 5 and 11 are our constants.
