Element Analysis Of Biological Samples

The chemical analysis of biological samples is an important measure of both human and

environmental health. For the most part, this type of analysis has been done by wet-chemical, destructive techniques and essentially ignored by the field of XRF. However, the XRF technique provides high accuracy and precision with excellent detection limits. A prime example of the biological matrix is food.

Conclusions: The presented method enables collection and multi-element analysis of small-sized biological samples, ranging down to the nanogram level. As such, the method paves the road for single cell and tissue-specific quantitative ionomics, which allow for future transcriptional, proteomic and metabolomic data to be correlated with

ionomic profiles.
