A conic section (or simply conic) is a curve obtained as the intersection of the surface of a cone with a plane; the three

types are parabolas, ellipses, and hyperbolas. A conic section can be graphed on a coordinate plane. Every conic section has certain features, including at least one focus and directrix.

Conic Section: Circle When working with circle conic sections, we can derive the equation of a circle by using coordinates and the distance formula. The equation of a circle is $(x - h)^2 + (y - k)^2 = r^2$ where r is equal to the radius, and the coordinates (x, y) are equal to the circle center. The variables h and k represent horizontal or vertical shifts in the circle graph.

A conic section (or simply conic) is the

intersection of a plane and a double-napped cone. Notice in Figure 10.8 that in the formation of the four basic conics, the intersecting plane does not pass through the vertex of the cone. When the plane does pass through the vertex, the resulting figure is a degenerate conic, as shown in Figure 10.9.
