Zooplankton encompass representatives
of all the major invertebrate phyla,
including some that can only be found in
the plankton. Since they are the
principal diet of most larger pelagic
animals, including commercially
important fish, their study is essential for
forming a more complete understanding
of the functioning of marine ecosystems.

Bioluminescent Noctiluca scintillans (a dinoflagellate) Plankton is composed of the phytoplankton ("the plants of the sea") and zooplankton (zoh-plankton) which are typically the tiny animals found near the surface in aquatic environments. Like phytoplankton, zooplankton are usually weak swimmers and usually just drift along with the currents.

Zooplankton ~ MarineBio Conservation Society

DC: The zooplankton of the northern European seas has probably been studied more than that of any other region in the world, and whilst there are some basic zooplankton guides available for this area, they are mainly for students and cannot be used for accurate species level identification. So, there was no single, comprehensive, taxonomic guide to the range of species and larval stages found, available to researchers.
