MACROMOLECULAR PERTURBATION THEORY Suggests that when a drug-receptor interaction occurs, one of two general types of Macromolecular perturbation is possible: a specific conformational perturbation leads to a biological response (Agonist), whereas a non specific conformational perturbation leads to no biological response (Antagonist) 14.

THEORIES OF DRUG RECEPTOR INTERACTION

GPCR-based drugs represent around 40% of the total approved drugs available in the market. In addition, GPCRs that were previously untargeted are fast becoming validated targets, with an average of 3.5 receptors each year. G protein-coupled receptors (GPCRs) are membrane proteins that are located on the surface of a cell.
