Introduction to Laser Diode-Pumped Solid State Lasers ...

A laser diode, (LD), injection laser diode (ILD), or diode laser is a semiconductor device similar to a light-emitting diode in which a diode pumped directly with electrical current can create lasing conditions at the diode's junction.: 3 Laser diodes can directly convert electrical energy into light. Driven by voltage, the doped p-n-transition allows for recombination of an electron with a hole.

Laser diode - Wikipedia

There has been recent interest in diode pumped metastable rare gas lasers (DPRGLs) and their scaling to higher powers, due to the advantages of excellent beam quality and high

quantum efficiency. In this paper, a cw diode pumped rare gas amplifier (DPRGA) with single-pass longitudinally pumped configuration is studied theoretically based on master oscillator and power amplifier (MOPA). A five ...

The pump diode is a bare chip soldered to a brass plate with the top contact attached using silver conductive Epoxy. The DPM0101 is glued into a slot in its own brass plate with 4 screws and lock-washers for adjustment. I have built a unit similar to this for someone who needs to show non-laser types how a basic diode pumped microchip laser works.

The rod is typically 5 to 8 mm in diameter, 5 to 10 cm long, and surrounded by coolant that flows between an outer glass tube and the laser rod. The pump light from the diode

arrays is coupled into the rod by coupling optics. Several of the stacked laser arrays can be arrayed along the length of the laser rod.

The laser diode's "active region" resides in the i (intrinsic) region. The electrons and holes (i.e., the carriers) are pumped into the i region from the n and p regions, respectively. Figure 2 below shows a laser diode with the case cut away.

Cw laser oscillation of ruby at 694 nm in linear and ring resonators is reported for the first time, pumped with a 1 W laser diode at 405 nm as well as 445 nm. The ruby laser operates at room temperature with a threshold of 200 mW at 405 nm and 400 mW at 445 nm. So far output powers up to 36 mW have been achieved pumped at 405 nm.
