Abstract. One of the key metrics to benchmark different 3D architectures is the storage density, which is here indicated with Bit_Density. Given a specific Flash memory die, this density is defined as the ratio between the storage capacity of the die, Die_Capacity, and its silicon area, Die_Size. In this chapter we present some of the most advanced architectures of 3D arrays with vertical channels, which were mainly developed to increase Bit_Density and reduce the Source Line effect.
