Confluent hypergeometric functions - Ghent University Library

In mathematics, a confluent hypergeometric function is a solution of a confluent hypergeometric equation, which is a degenerate form of a hypergeometric differential equation where two of the three regular singularities merge into an irregular singularity. The term confluent refers to the merging of singular points of families of differential equations; confluere is Latin for "to flow together".

In mathematics, the Gaussian or ordinary hypergeometric function ${}_2F_1(a, b; c; z)$ is a special function represented by the hypergeometric series, that includes many other special functions as specific or limiting cases. It is a solution of a second-order linear ordinary differential equation (ODE). Every second-order linear ODE with three regular singular points can be transformed into this ...

Hypergeometric function - Wikipedia

$1 + [1 + 4(x^2 + v^2)]^{1/2} - 2x < p(x) < 0$. From the recurrence relation for $K_v(x)$ $K_{v+1}(x) = -K_v(x) - K_{-v}(x)$ we obtain $K_v + 1(x)/K_v(x) = -[1 + 4(x^2 + v^2)]^{1/2} - p(x)$. Using the x above inequality for p , we conclude that the lemma is proved. 0 Theorem 1 For $x > 0$, $a > 0$, $b \in \mathbb{R}$, $j = 1, 2, 3, \dots$ we have $t_j^{>j}(a, b, x) > t_{j-1}^{>j-1}(a, b, x) 2^{(j-1)} + 1 + [1 + 4(j-b)^2 + 16xa]^{1/2}$

On the expansion of confluent hypergeometric functions in

The confluent hypergeometric function is a degenerate form the Hypergeometric Function which arises as a solution the Confluent Hypergeometric Differential Equation. It is commonly denoted ${}_1F_1$, or M , and is also known as Kummer's Function of the first kind. An alternate form of the solution to the Confluent Hypergeometric

Differential Equation is known as the Whittaker Function.

Confluent Hypergeometric Function of the First Kind

The generalized Gauss function is also used in mathematical statistics and the basic analogues of the Gauss functions have applications in the field of number theory. Dr Slater's treatment leads on from a discussion of the Gauss functions to the basic hypergeometric functions, the hypergeometric integrals, bilateral series and Appel series.

Then, the hypergeometric matrix function ${}_2F_1(N_1, N_2; N_3; z)$ is given by. Definition 4. If E is the positive stable matrix in , then the Laguerre-type matrix polynomial is defined by where ${}_1F_1$ is the confluent hypergeometric matrix function (cf.). Definition 5. (see[28, 32, 33]).

A Note on the Appell Hypergeometric Matrix Function F_2

Abstract In Slater's 1960 standard work on confluent hypergeometric functions, also called Kummer functions, a number of asymptotic expansions of these functions can be

found. We summarize expansions derived from a differential equation for large values of the a -parameter.
