q reaction = - (4.18 J / g·C x mwater x Δt + C x Δt) q reaction = - (4.18 J / g·C x mwater + C)Δt. Where q is heat flow, m is mass in grams, and Δt is the temperature change. Plugging in the values given in the problem: q reaction = - (4.18 J / g·C x 1200 g + 840 J/C) (3.54 C) q reaction = -20,700 J or -20.7 kJ.

Heat Experiments : Fizzics Education

The lower the temperature, the slower the average speed of the molecules. When heat moves into a material it sometimes causes a change in temperature. Adding heat to a collection of molecules will cause their random motion to increase—the molecules will move faster on average than they did before heat was added.

Lab: Calorimetry - Chemistry

The water can be driven off by heating in an oven, leading to a measurable decrease in weight, which will gradually be regained if the fibre is returned to a 'normal' atmosphere. This effect is crucial in the textile industry - where the proportion of a material's weight made up by water is called the moisture regain. References
