law of universal gravitation each object attracts the other object with a force that is directly proportional to the product of the masses of the objects, and inversely proportional to the square of the distances between their centers of mass

Conceptual Physics Chapter 12 Universal Gravitation ...

The Law of Universal Gravitation states that every point mass attracts every other point mass in the universe by a force

pointing in a straight line between the centers-of-mass of both points, and this force is proportional to the masses of the objects and inversely proportional to their separation This attractive force always points inward, from one point to the other.

Newton's Law of Universal Gravitation | Boundless Physics

To solve this problem, use Newton's law of universal gravitation:
$$F_G = G \frac{m_1 m_2}{r^2}$$
 We are given the constant, as well as the satellite masses and distance (radius). Using these values we can solve for the force.
