**Control Of Linear And Nonlinear** Non-linear Control Systems. We can simply define a nonlinear control system as a control system which does not follow the principle of homogeneity. In real life, all control systems are non-linear systems (linear control systems only exist in theory). **Types of Control Systems | Linear and Non Linear Control ...** Nonlinear control theory is the area of control theory which deals with systems that are nonlinear, time-variant, or both. Control theory is an interdisciplinary branch of engineering and mathematics that is concerned with the behavior of dynamical systems with inputs, and how to modify the output by changes in the input using feedback, feedforward, or signal filtering. The system to be controlled is called the "plant". One way to make the output of a system follow a desired reference signal is

**Linear vs. Nonlinear Control** It takes into account the main specific nonlinearities. The proposed control law consists of an exact input-output linearization via a static nonlinear state feedback. In our case, this control law leads to a one-dimensional unobservable subspace in closed-loop. A physical interpretation of this nonlinear control is given.
