This blog post is divided into 3 parts. In Part 1, we'll focus on the high-level architecture of the Selenium framework.

Part 2 will guide you through the steps to build the core components of the framework. Finally, Part 3 will discuss the utilities we can add to enrich our Selenium framework and increase productivity. Although it's highly recommended that you read each part in the suggested order, you can still jump to the parts that most interest you.

Step 1: The first step is to select a programming

language. In the Selenium world, you have a wide range of programming languages to choose from such as Java, C#, Ruby, Python, etc. In my opinion, Java is a good choice because it is widely adopted and cross-platform. Step 2: Next you choose a unit test framework.
