The Boiling Point

There are two conventions regarding the standard boiling point of water: The normal boiling point is 99.97 °C (211.9 °F) at a pressure of 1 atm (i.e., 101.325 kPa). The IUPAC recommended standard boiling point of water at a standard pressure of 100 kPa (1 bar) is 99.61 °C (211.3 °F).

Boiling point - Wikipedia

The boiling point of a liquid varies according to the applied

pressure; the normal boiling point is the temperature at which the vapour pressure is equal to the standard sea-level atmospheric pressure (760 mm [29.92 inches] of mercury). At sea level, water boils at 100° C (212° F). At higher altitudes the temperature of the boiling point is lower.

boiling point | Definition, Examples, Temperature, & Facts ...

The simple answer to this question is that the boiling point of water is 100 °C or 212 °F at 1 atmosphere of pressure . However, the value is not a constant. The boiling point of water depends on the atmospheric pressure, which changes according to

elevation.

What Is the Boiling Point of Water? - ThoughtCo

The boiling point of a substance is the temperature at which the vapor pressure of the liquid is equal to the surrounding atmospheric pressure, thus facilitating transition of the material between gaseous and liquid phases.

Boiling Point of Gases, Liquids & Solids | Toolbox ...

The boiling point is defined as the temperature at which a liquid's saturated vapour pressure equals the atmospheric pressure surrounding it. The boiling point for any material is the temperature point at which the material

transforms into the gas phase in the liquid phase. This happens at 100 degrees centigrade for water.

boiling point - Wiktionary

Boiling point elevation equation. Remember that the boiling point of water depends solely on pressure. This boiling point calculator finds the pressure at altitude assuming that the pressure at sea level is constant and equal to 1013 hPa (1.013 bar). This approximation is sufficient for this kind of calculations.
