So now let's try to design a bit of circuitry using digital logic signals of 0 and 1, which will do addition. And so we're going to try to design a little six bit binary addition circuit. So I'm going to have as inputs, the six digits of the first binary number--a 5 down through a 0 and then the second binary number.

Let's call it b 0 through b 5.

Most digital logic is synchronous because it is easier to create and verify a synchronous design. However, asynchronous logic has the advantage of its speed not being constrained by an arbitrary clock; instead, it runs at the maximum speed of its logic gates.

Building an asynchronous system using faster parts makes the circuit faster.
