Controlled and Living Polymerizations | Wiley Online Books

In polymer chemistry, living polymerization is a form of chain growth polymerization where the ability of a growing polymer chain to terminate has been removed. This can be accomplished in a variety of ways. Chain termination and chain transfer reactions are absent and the rate of chain initiation is also much larger than the rate of chain propagation. The result is that the polymer chains grow at a more constant rate than seen in traditional chain polymerization and their lengths remain very si

The introductory slide from the home page, reproduced below, indicates that Controlled/"Living" Radical Polymerization (CRP) procedures can be used for the preparation of copolymers, incorporating a broad spectrum of radically (co)polymerizable monomers forming materials with predetermined molecular weight, and narrow molecular weight distribution.(2) The most recent work on conducting an ATRP with low concentration of transition metals indicates that some control over the breadth of the MWD ...

Many stable free radical polymerizations are conducted in bulk or homogeneous solutions, but heterogeneous systems can also be successful. Both miniemulsion and emulsion polymerizations were well controlled with TEMPO and SG-1 . While lower temperature SFRP processes have been reported (e.g., methyl acrylate can be initiated using the azo-initiator V-70 and mediated by Coporphyrins at <60 °C), elevated temperatures are generally required for TEMPO mediated emulsion polymerizations (above ...

Controlled and Living Polymerizations. From Mechanisms to Applications. Edited by Axel H. E.... Kilbinger, Andreas F. M. 2010-02-08 00:00:00 Since Michael Szwarc's introduction of the term "living polymerization" about 50 years ago, the field of polymer chemistry has changed significantly. Many methods that allow control over the polymerization process have been added to the polymer chemist's toolbox since then, such as cationic ring-opening polymerization, group-transfer ...

Living Radical Polymerization. Since living cationic polymerizations were achieved and became popular in the 1980s, some polymer scientists began wondering, in the 1990s, that the last target in

living polymerization would be radical polymerization.¹⁶ Although there were a few pioneering works in the 1980s directed to living radical polymerization,^{17,18}

Controlled and Living Polymerizations: From Mechanisms to Applications The focus of modern polymer synthesis has been on the precise control of macromolecular architecture and functionality. With easy to handle techniques such as ATRP or RAFT polymerization, synthetic techniques have become available to synthetic working chemist that allow an unprecedented control, which could hardly even been dreamed of 20 years ago.
