With only 50 particles, the LWEnKF assimilates the sea-surface temperature (SST), sea-surface height (SSH), temperature, and salinity profiles with affordable computational cost, providing a reasonable forecast. Moreover, the LWEnKF is compared with the ensemble Kalman filter (EnKF) and the local particle filter (PF).

An application of the localized weighted ensemble Kalman ...

The ensemble Kalman filter is a recursive filter suitable for problems with a large number of variables, such as discretizations of partial differential equations in geophysical models. The EnKF originated as a version of the Kalman filter for large problems, and it is now an important data assimilation component of ensemble forecasting. EnKF is related to the particle filter but the EnKF makes the assumption that all probability distributions involved are Gaussian; when it is applicable, it is

Data Assimilation Research Testbed -- DART Introduction

Ensemble-based data assimilation algorithms • Can use ensemble to model the statistics of the first guess (“background”) errors. • Better blending of observations and first guess. • Initial tests show dramatically improved sets of objective analyses.

Ensemble-Based Data Assimilation

Ensemble Kalman filters, in general, take the analysis resulting from the data assimilation to lie in the same subspace as the

expected forecast error. Under our hypothesis the dimension of the subspace corresponding to local regions is low. This is used in our scheme to allow operations only on relatively low-dimensional matrices.
