What is Remote Sensing? - YouTube

Remote sensing is the process of detecting and monitoring the physical characteristics of an area by measuring its reflected and emitted radiation at a distance (typically from satellite or aircraft). Special cameras collect remotely sensed images, which help researchers "sense" things about the Earth.

What is remote sensing and what is it used for?

By interpreting images obtained through remote sensing, an area can be closely studied without anyone needing to be physically present, making the research of dangerous or unreachable areas possible. Remote sensing can be applied to various fields of study. The following are just a few applications of this continually-developing science.
