Autonomy is about having control and choice over one's life. Being supported to continue with routine daily tasks such as shopping, walking a dog or going to a social club can be instrumental in maintaining a person's autonomy. Autonomy is particularly at risk where a person needs help with their most basic and private needs, as may happen in hospital or residential care, or when impairment affects their ability to communicate.

Autonomy - Respecting dignity - Resources - Dignity in Care

Abstract. Emotional well-being is most typically studied in trait or

trait-like terms, yet a growing literature indicates that daily (within-person) fluctuations in emotional well-being may be equally important. The present research explored the hypothesis that daily variations may be understood in terms of the degree to which three basic needs—autonomy, competence, and relatedness—are satisfied in daily activity.

WeD Research Review 1 – June 2009. Self-determination Theory and Wellbeing. By Prof. Richard Ryan*. Self-determination theory (SDT) is a macro-theory of human motivation, personality development, and well-being. The theory focuses especially on volitional or self-determined behaviour and the social and cultural conditions that promote it. SDT also postulates a set of basic and universal psychological needs, namely those for autonomy, competence and relatedness, the fulfilment of ...
