Geology Of The Sierra Nevada

The Sierra Nevada is a mountain range in the Western United States, between

the Central Valley of California and the Great Basin. The vast majority of the range lies in the state of California, although the Carson Range spur lies primarily in Nevada. The Sierra Nevada is part of the American Cordillera, an almost continuous chain of mountain ranges that forms the western "backbone" of the Americas. The Sierra runs 400 miles north-south and is approximately 70 miles across east-west. Notable Sier

Geology of the Sierra Nevada (California Natural History ...

A HUNDRED YEARS after King and Cotter's wild adventure in the high peaks of the Sierra Nevada, and Brewer's careful explorations, geographers knew the shape of the range and the locations of its high peaks, and geologists had a good idea of its rocks and how old they were, but they still did not know why the Sierra was where it was or how it got

there, or for that matter, why any of the Earth's mountain ranges are where they are.

Geology of the Sierra Nevada: Revised Edition on JSTOR

The Sierra Nevada, along with most of North America west of the Cordillera, is composed of tectonically accreted terranes of Paleozoic and Mesozoic age. Many of these terranes are exotic, in that they originated far from North America, and have complex histories of amalgamation and rotation.

Sierra Geology | where rocks meet the human environment ...

The formation of the Sierra Nevada and its relationship to the adjacent Great Basin have been major geologic questions since the 1800's (LeConte, 1886). From the study of Eocene gold-bearing paleoriver deposits in the Sierra Nevada, Lindgren (1911) concluded that the Eocene mountain range had similar relief but was slightly lower than the modern range.

Uplift of the Sierra Nevada, California | Geology ...

The geology of Nevada began to form in the Proterozoic at the western margin of North America. Terranes accreted to the continent as a marine environment dominated the area through the Paleozoic and Mesozoic periods. Intense volcanism, the horst and graben

landscape of the Basin and Range Province originating from the Farallon Plate, and both glaciers and valley lakes have played important roles in the region throughout the past 66 million years.

Geology of Nevada - Wikipedia

Geology It has long been recognized that the Sierra Nevada is an upfaulted, tilted block of the Earth's crust. A major fault zone bounds the block on the east, and it was along this that the great mass that became the Sierra Nevada was uplifted and tilted westward. This explains the asymmetry of the range.
