In physics, the physical dimension of a

quantity refers to the type of units that must be used to describe it. The basic construction blocks of dimensional analysis are the so-called base dimensions, this is a set of physical dimensions, which to an extent is a matter of convention, that can be used to build the physical dimension of any quantity.

$s = ut + \frac{1}{2}at^2$. (1) The equation contains three terms: s , ut and $\frac{1}{2}at^2$. All three terms must have the same dimensions. s : displacement = a unit of length, L . ut : velocity $\times$ time = $LT^{-1} \times T = L$. $\frac{1}{2}at^2$ = acceleration $\times$ time = $LT^{-2} \times T^2 = L$. All three terms have units of length and hence this equation is

dimensionally valid.
