Most chemical reactions can be identified by the formation of solids or gases, or by a color change in the solution. Reactions are also characterized by the exchange of heat with their surroundings. Exothermic reactions release heat to their surroundings, while endothermic reactions absorb heat from their

surroundings.

Classifying Chemical Reactions - Fountainhead Press

The reactants and products determine the type of chemical reaction. If there are more products than reactants, then it is a decomposition reaction. If there are more reactants than products, it is a synthesis reaction. If oxygen is a part of the reactant, it is a combustion reaction. If one ion replaces another, it is a single replacement reaction.
