Polymer solutions are solutions containing dissolved polymers. These may be liquid solutions, or solid solutions. The introduction into the polymer of small amounts of a solvent

reduces the temperature of glass transition, the yield temperature, and the viscosity of a melt. An understanding of the thermodynamics of a polymer solution is critical to prediction of its behavior in manufacturing processes — for example, its shrinkage or expansion in injection molding processes, or whether ...

If a non-solvent is added to this solution, the attractive forces between polymer segments will become higher than the polymer-solvent interactions. At some point, before precipitation, an equilibrium will be reached, in which $\Delta G = 0$, and therefore $\Delta H = T\Delta S$, where ΔS reaches its minimum value.
