Sediments are continually deposited by streams and rivers into both large and small bodies of water. The science of examining and analyzing layers of sediment and sedimentary rock is called stratigraphy a branch of geology which treats the formation, composition, sequence and correlation of the layered rocks as parts of the Earth's crust.. In almost all cases, the layer on the top of

a series of strata is the youngest and the ones underneath are progressively older.

Lab 5: (Geologic) Timing Is Everything!

The mathematical formula is expressed as follows: $\text{age} = (\text{half-life}) \times \ln(D/P + 1) \div \ln 2$. where age is the absolute age (typically using years as the time unit),

$\ln$ is the natural logarithm, D is the amount of daughter isotope, and P is the amount of parent isotope.

Lab--Geologic Time

This hands-on interactive geologic timeline activity works well with 7th - 10th grade earth science students and I find it really helps make an abstract concept of the history of the earth more concrete. Included are six different tables of events on six different masters so that even with a class of 36, having small groups of three ensures six different timelines with only two small groups making the same one (although all time lines have all four eras).
